DEVINFO ADVISORY COMMITTEE

NEW YORK

22 MAY 2007

Using DevInfo to Track Aid Effectiveness

Objective

- ✓ to enhance the transparency and accountability of aid assistance
- ✓ to track resources and results in order to facilitate coordination and enhanced decision-making
- ✓ to allow managing aid assistance projects and related data
- to create standard data views, reports and other presentation objects
- ✓ to exchange data with other development assistance tools

What this module offers

- recording projects and tracking funding under three categories for each project:
 - Sectors (i.e. Education, Agriculture)
 - Funding Agency (i.e. bilateral donor)
 - 1st level Partner (i.e. UN Agency)
- all data in the system are recorded and maintained by funding agency and partner

What's new in database administration

- allows creating template that includes projects with related details linked to the three categories
- geographical areas are also included along with their geo-spatial data
- in template, projects are entered as indicators and project details (project code, start date, end date etc) as subgroups
- sector, funding agency and 1st level partner categories are entered and projects are linked to their respective categories
- allows data entry against the template for multiple time periods and sources

What's new in the User Interface

- Allows searching for projects from three categories Sector, Funding agency and 1st level partner
- Projects are searched for selected time period and geographical area
- Allows viewing project details sector wise, funding agency wise or 1st level partner wise
- Views can be generated grouped by categories and further grouped by projects
- Allows creating customized tables, graphs, maps and reports of the searched data
